TECHNICAL SERVICES

WHAT WE DO AND WHO WE TURN TO

WE TURN TO

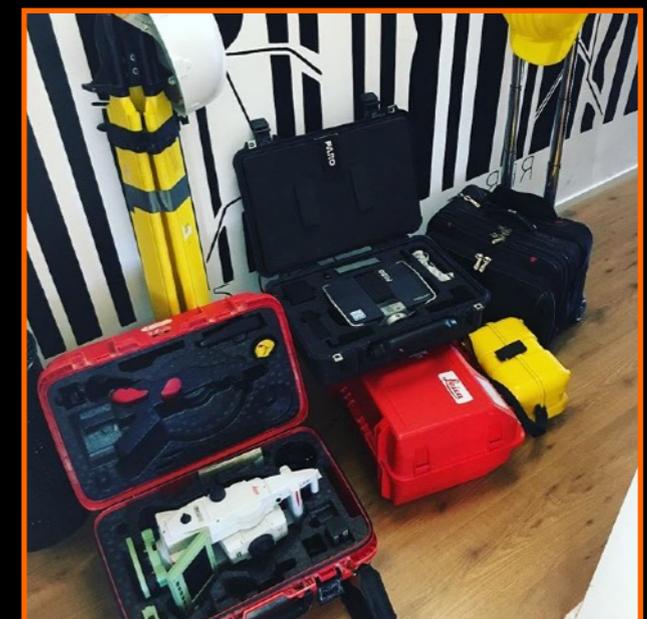

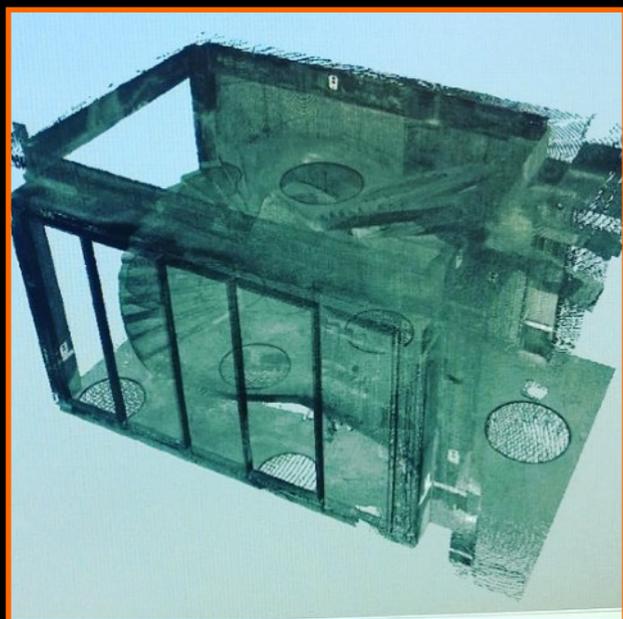

Contract Companies
Architecture Studios
Engineering Studios
Marble and Granite Industry
Wood Industry
Metal Industry
Glass Industry
General Contract Companies
Hotel Industry
Retail
Private Customers

THE SERVICES WE OFFER

Surveys with 3D scanner
Topographic measurements
Construction site Tracking
Shopdrawing implementation
Design management
Cutting list creation
Project management
Budgeting and quantitating support
Supervision of Production
Technical management of the construction site

MANUAL and instrumental SURVEYS

All "tailor-made" projects arise from the execution of a good survey. Being aware of how the measurements will be used and knowing how to do them in relation to a specific purpose is essential to collect them correctly: for this reason, surveying remains one of the most delicate and basic activities for a project success.

SURVEYS *with* 3D SCANNER - bring the construction site home

Surveys with 3D laser scanner and point cloud management.

Having the three-dimensional CAD model of the construction site at your disposal allows you to anticipate technical solutions: a real and measurable photograph of the construction site actual state.

3D scan of M / Y type vessel

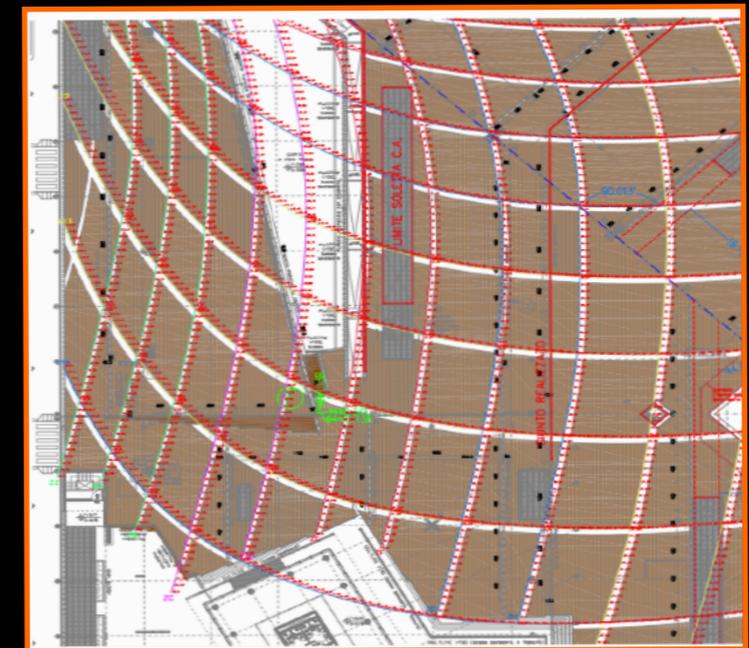

Shop 3D scan

TRACKING on CONSTRUCTION SITE

The project on paper is directly related and represented on site.

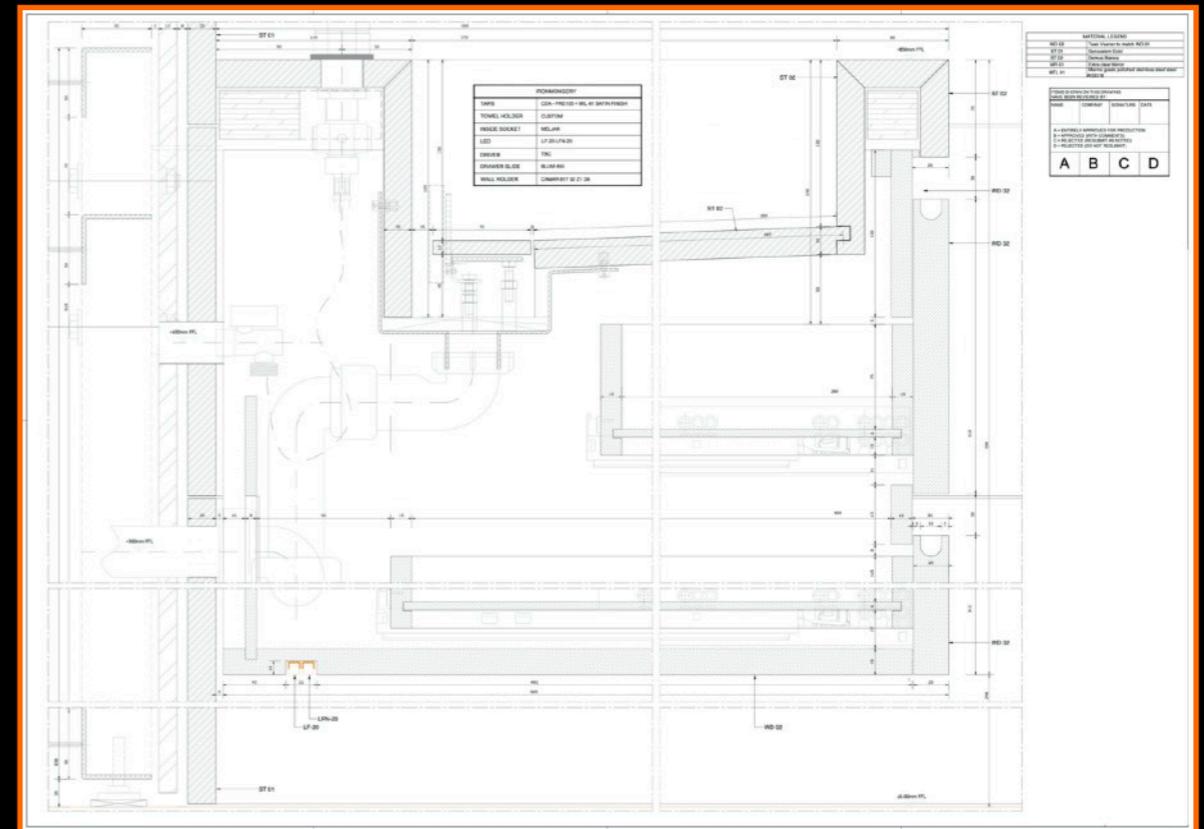

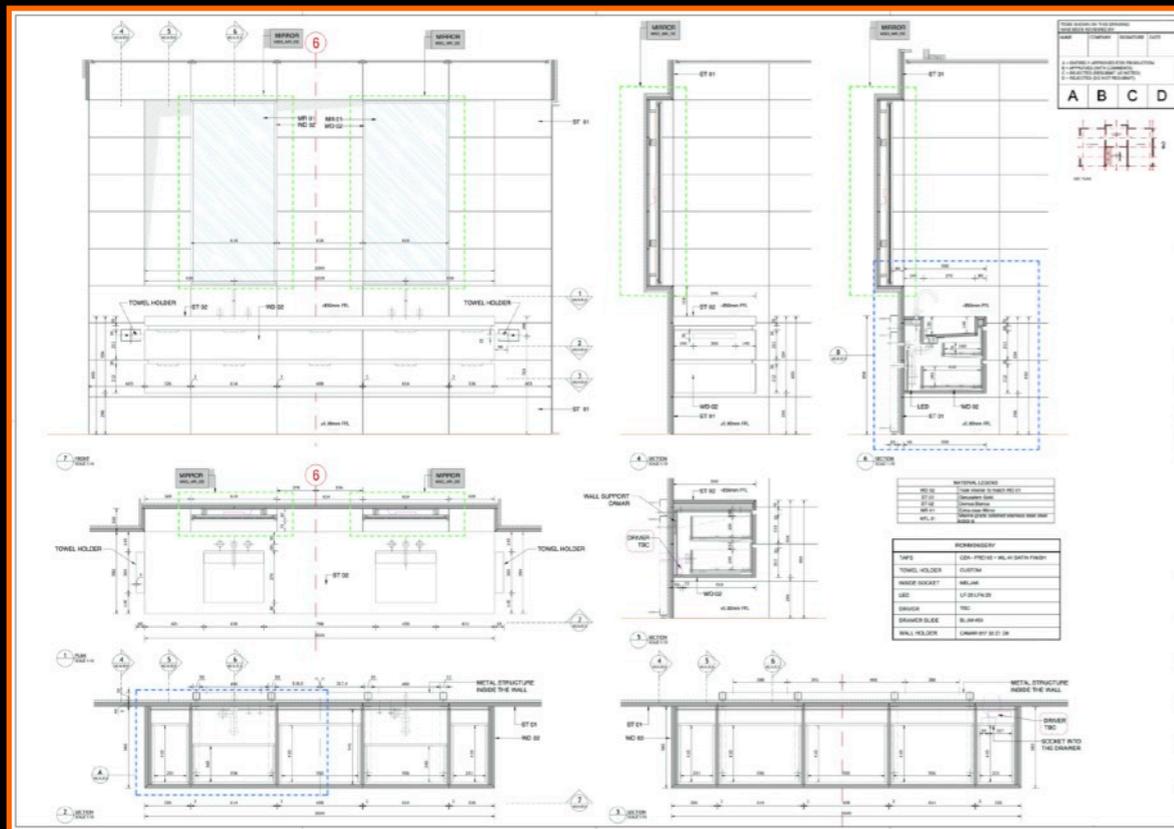

Through the use of the total station and traditional instrumentation, we are able to place to the site the position of any element designed on the map.

PRODUCTION *executive* DRAWINGS (SHOPDRAWING)

Core business of our studio, engineering and attention to detail represent everyday life within our studio. Through the design analysis we try to find the best technical solutions for the realization of the construction details required by the project.

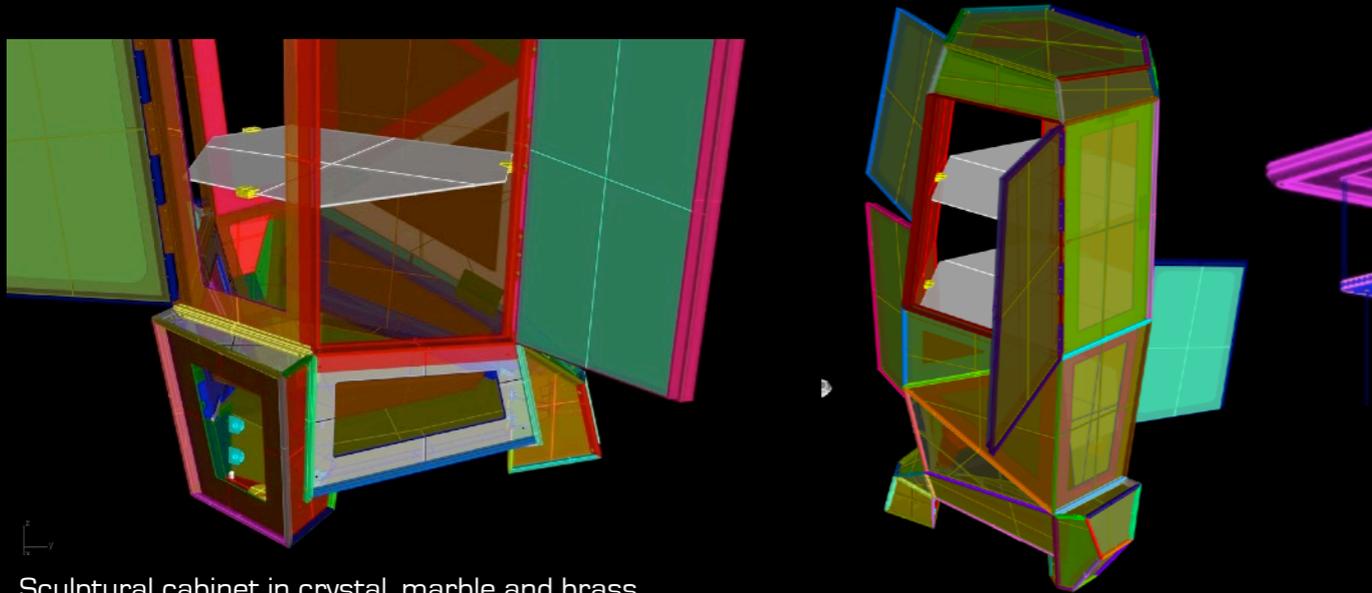

Our know-how allows us to relate with the necessary autonomy, depending on the needs, with the end customer or with his trusted technician, whether he/she is a designer, architect, engineer, surveyor, that is all the figures involved in the Concept - Production - Installation chain.

Sculptural cabinet in crystal, marble and brass

4m diameter table covered in marble with automated rotating plate

Exploded view of an extendable table in wood and marble

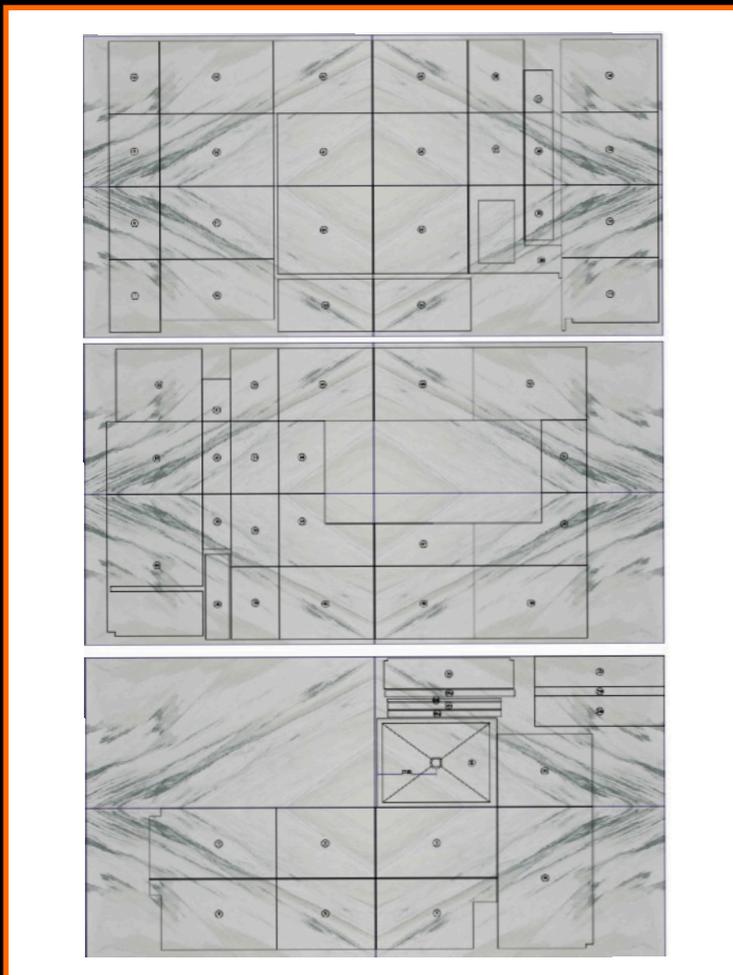

3D executive and production files

CUTTING list CREATION

As Studio RBR we offer an editing service of the cutting lists necessary for the production, thanks to the owners' direct experience developed with a high-level marble worker and the know-how that the studio has carried out over the years.

Giving the last indication for cutting is a responsibility that not everyone is willing to assume, to do so it is necessary to know the properties of the materials and the limits of the machines available to the customer.

For this reason, we must be flexible and always adapt to the production realities with which we face the different situations, enhancing their peculiarities.

NOTE

MOCKUP management

Whether it is a furniture or a room that must act as a prototype, as in the case of a hotel project, we take care of the creation of the mockup in all its details, thus letting our client verify the quality of each item so that in the project all the necessary improvements can be added to avoid changes and settlements during construction.

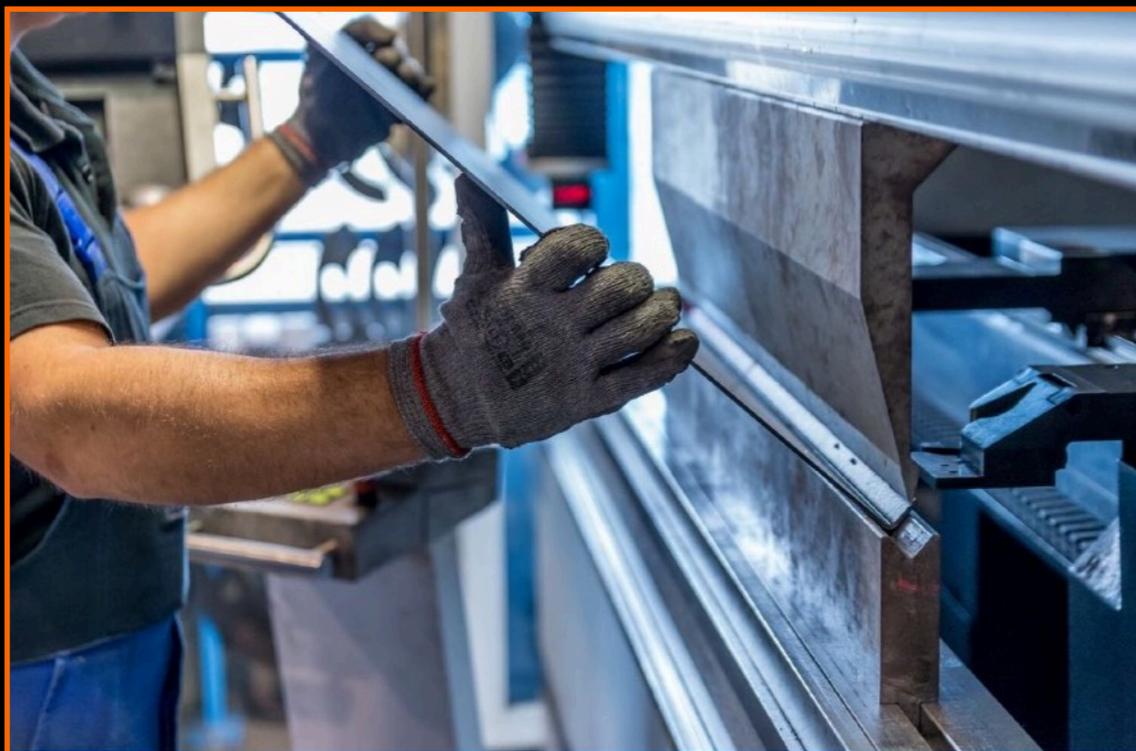

The total mockup management, despite it is often a complex activity, brings an improvement to the final result of the project and, in the long term, can also bring economic benefits in terms of savings.

SUPERVISION of PRODUCTION

Our experience developed over the years led us to attach great importance to services related to technical support for production control.

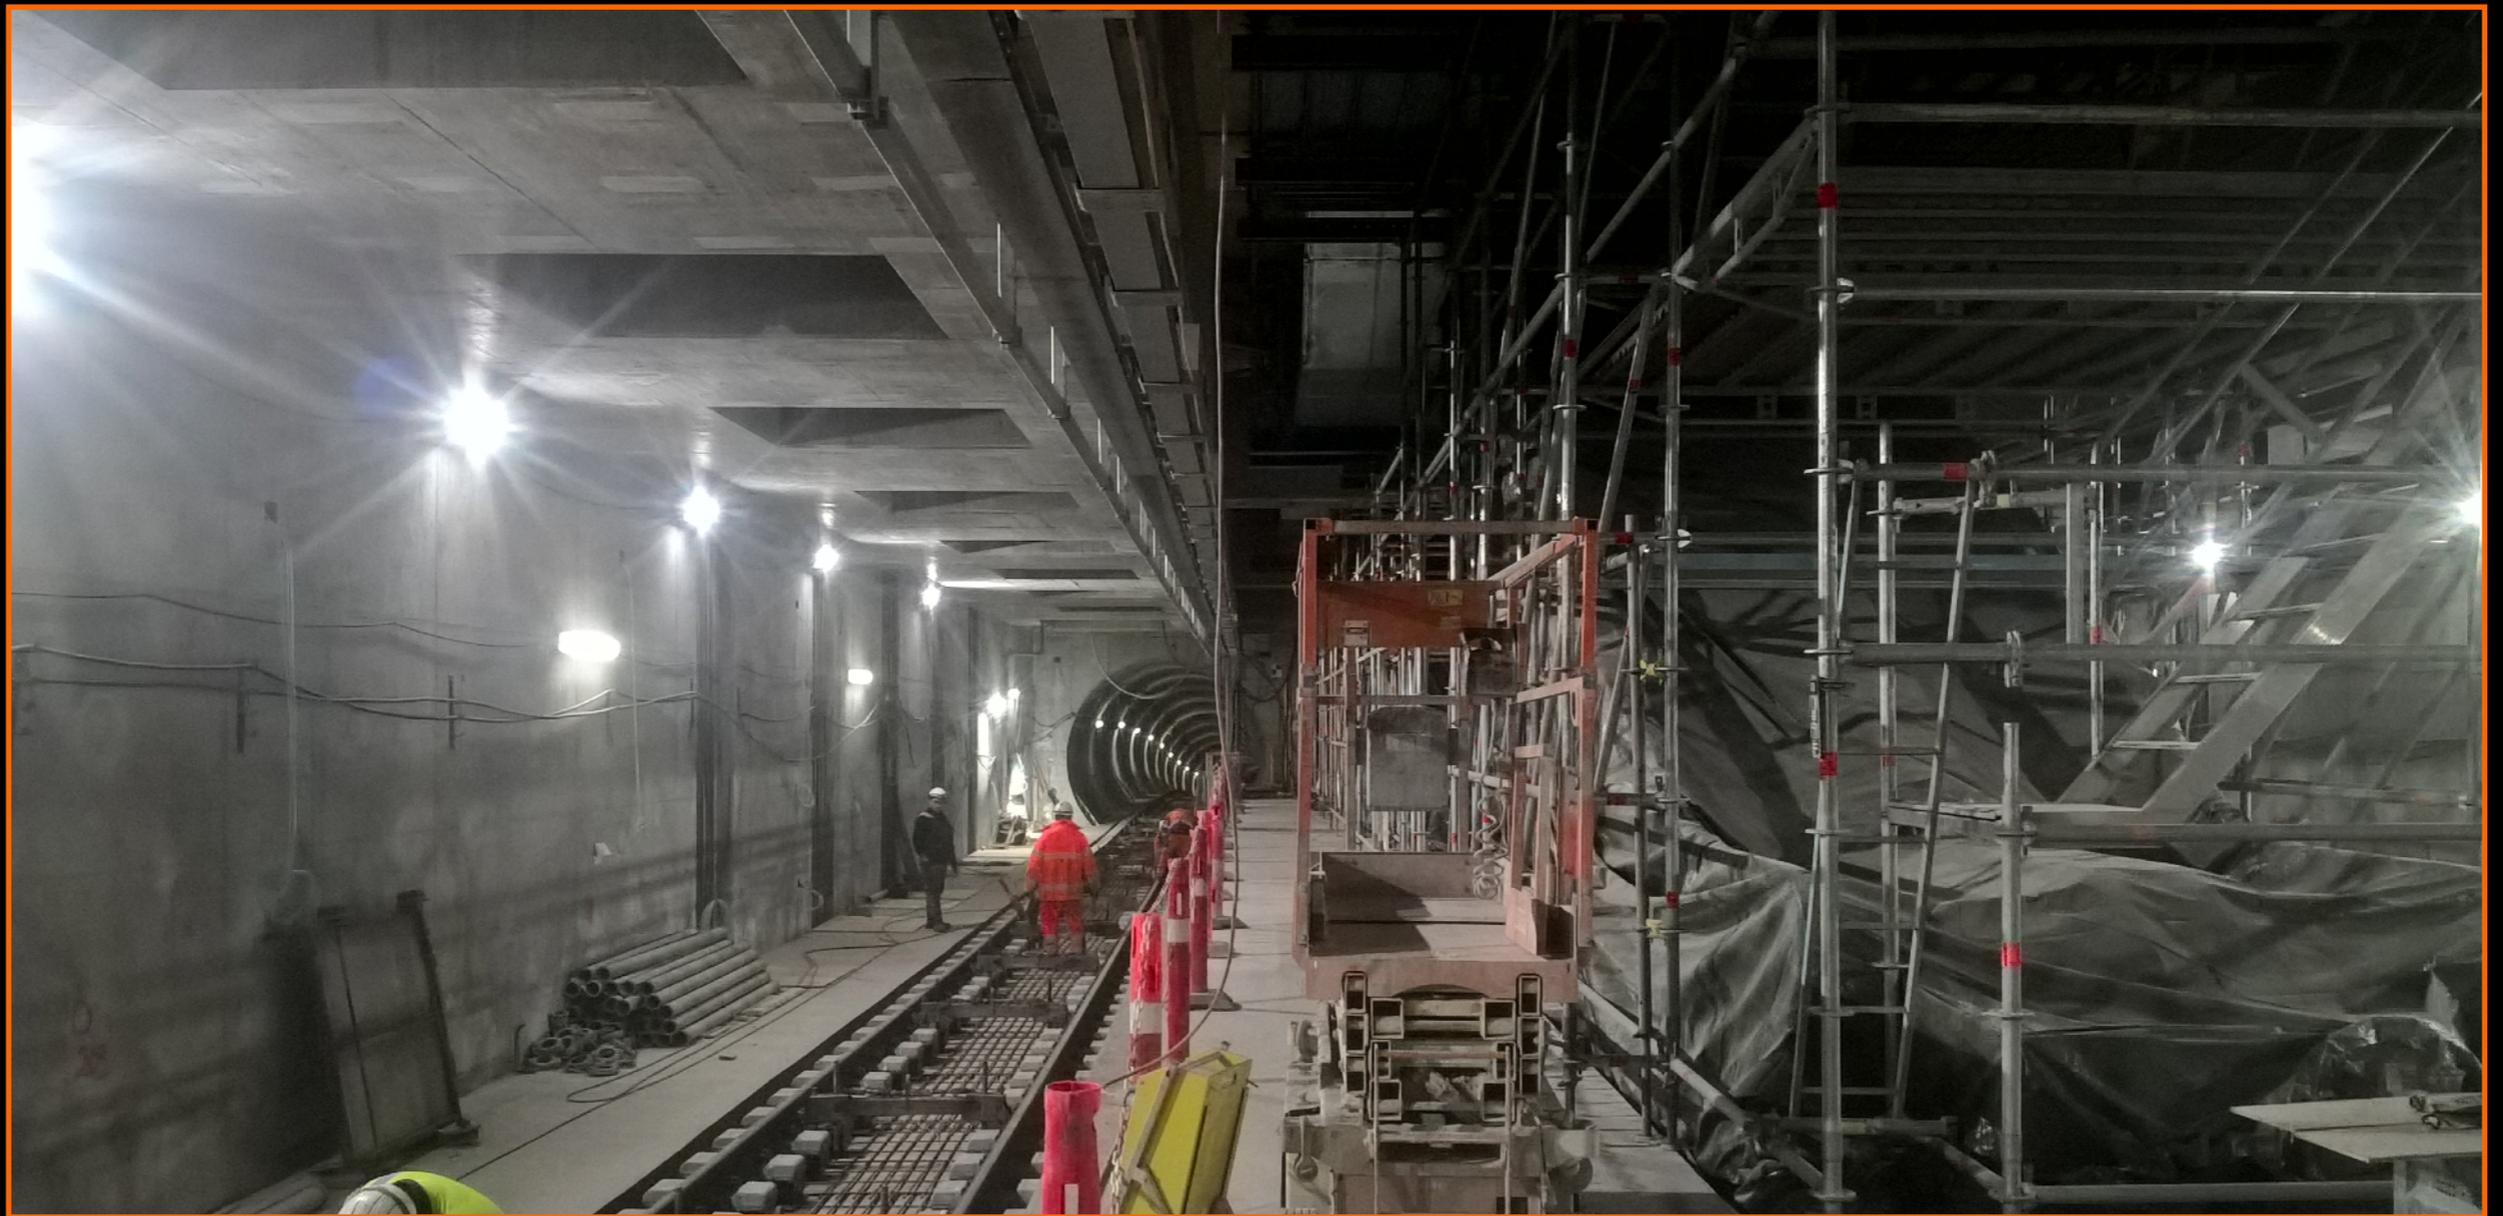

Constant dialogue with suppliers is a fundamental element to obtain work in a workmanlike manner. What we can provide is control and supervision during the production phases, ensuring compliance with the project and the required quality as well as execution times.

We can also support you on elements such as logistics. We can manage shipments and packaging lists, we identify the best packaging based on the mean of transport used (by road, plane, train or ship) and the destination among the different countries.

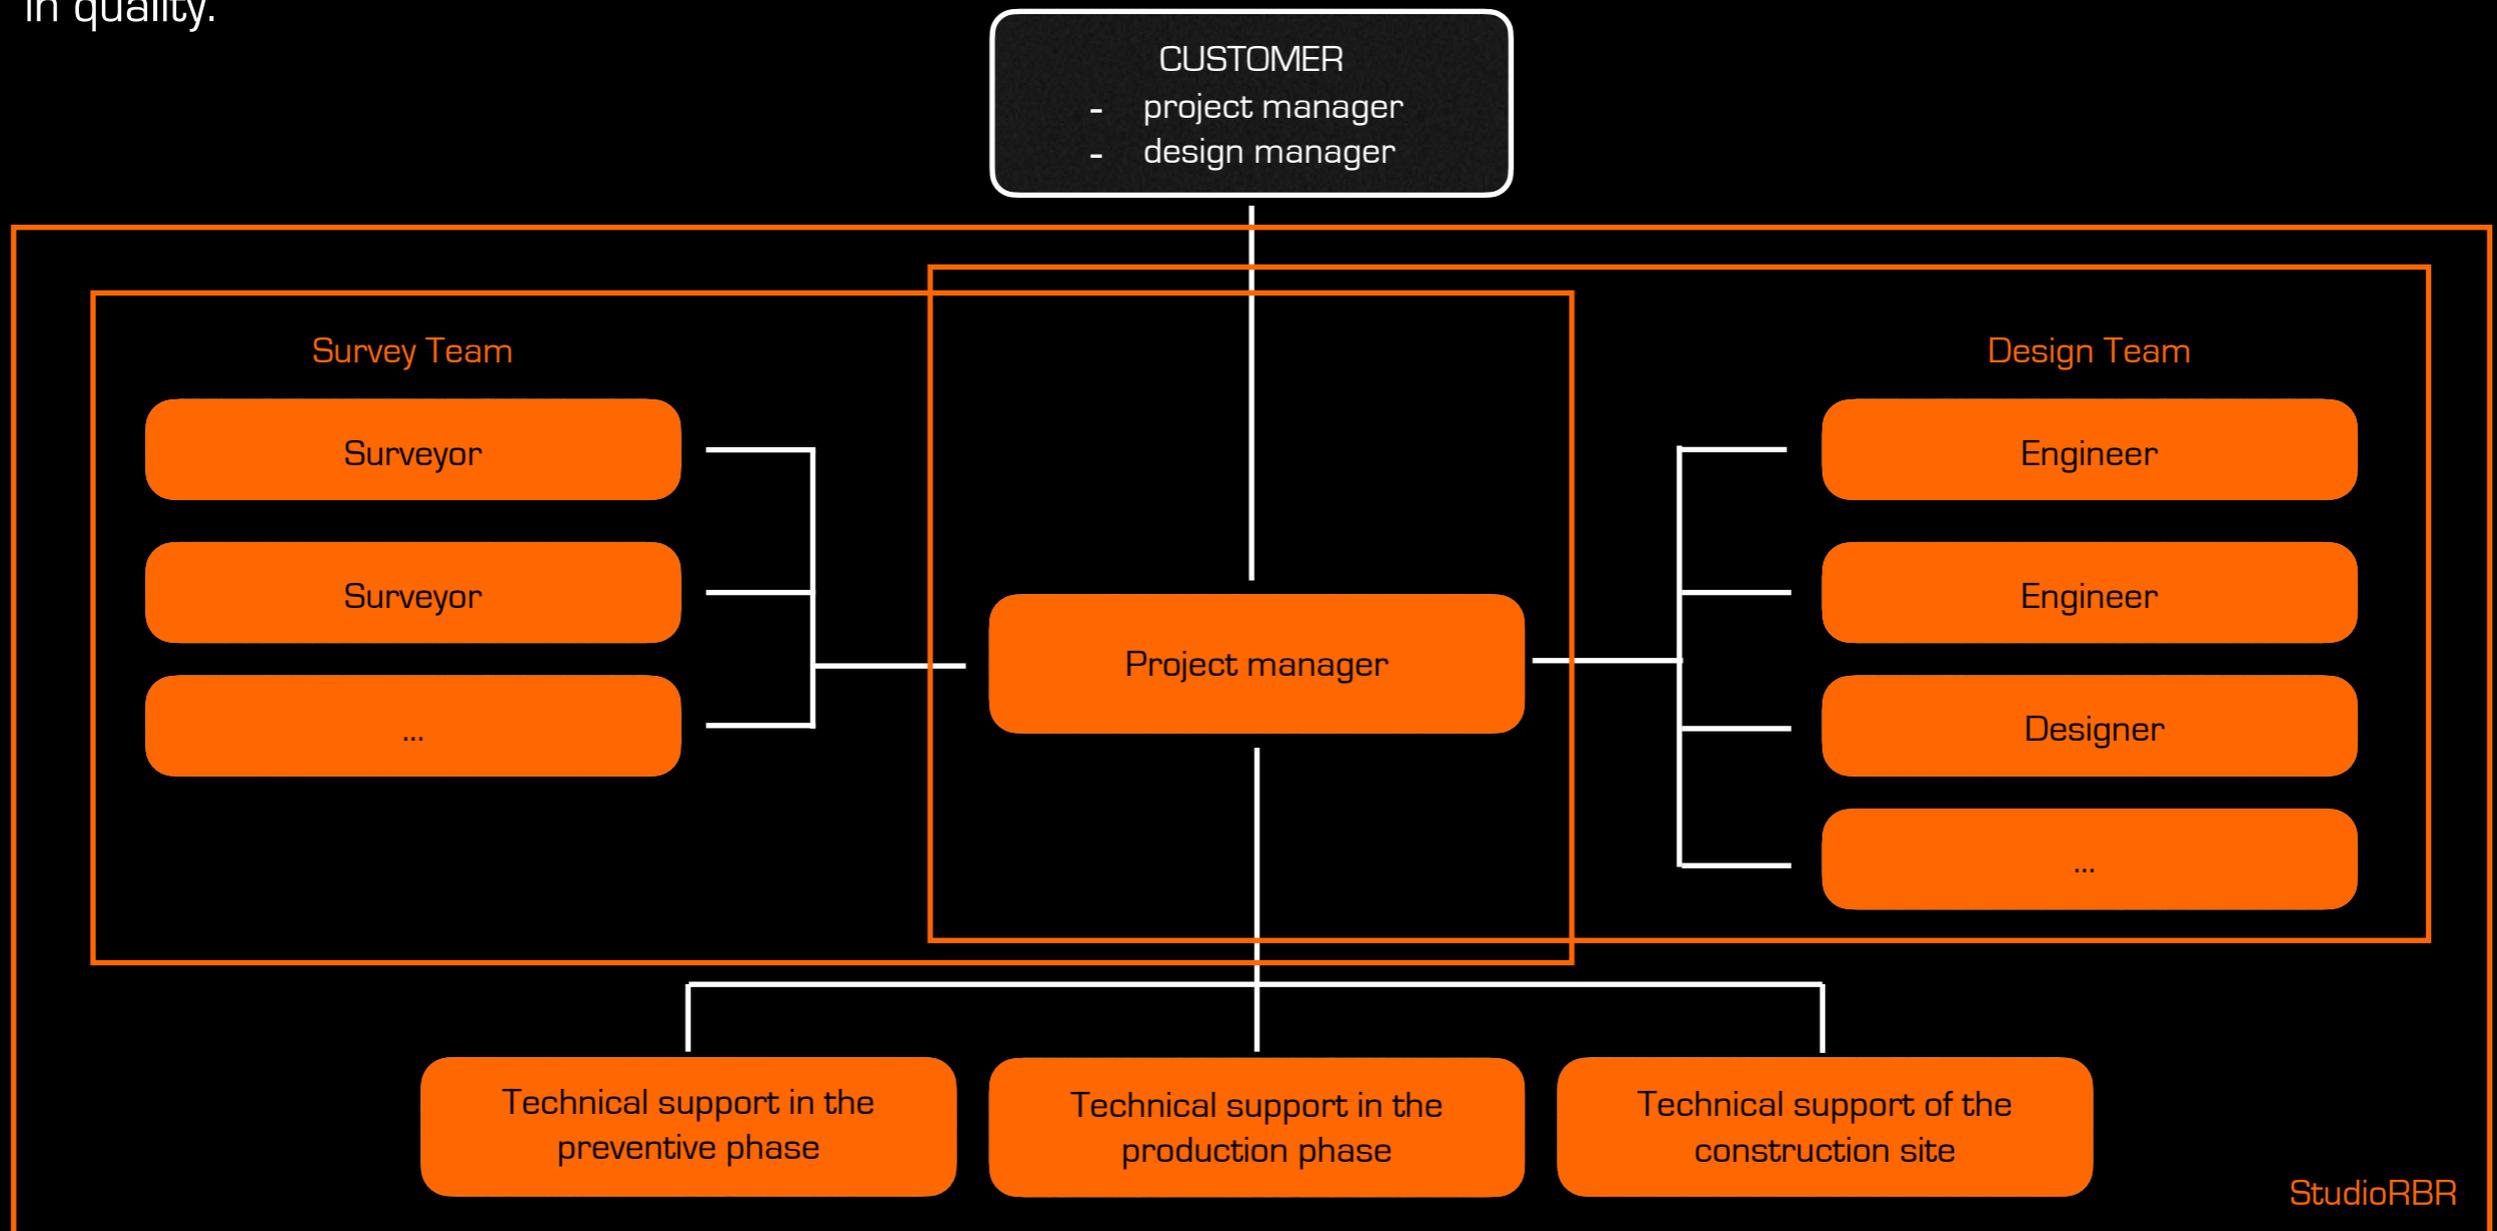

TECHNICAL *management of the* CONSTRUCTION SITE

With the help of our qualified site technicians, we are able to supervise the site installations and logistics. Through the technical knowledge of the project we can let the needs of installers and designers live together, making the installation process fluid.

HOW we are ORGANIZED

Depending on the project, the customer's requests, we can shape dedicated work teams, flexible both in number and in quality.

So that each project can find the best realization and the best compromise among costs, times and quality of the final product.

WHERE *we can* TAKE YOU

GLOBAL EXPERTISE - WE ARE PRESENT WHEREVER YOU NEED IT

We created works in the most varied international contexts, in CLOSE contact with different working cultures.

WHAT DO *we make you* EARN?

- ▶ RECORD TIME
OUR STRUCTURE ALLOWS US TO REDUCE THE EXECUTION TIMES OF THE DRAWINGS
- ▶ SHORT REACTION TIME
THANKS TO OUR STRUCTURE WE ARE ABLE TO INTERVENE QUICKLY
- ▶ INTERFACE WITH THE KEY FIGURES OF EACH PROJECT
TAKING ADVANTAGE OF OUR EXPERIENCE IN THE DYNAMICS OF THE PROJECTS CARRIED OUT
- ▶ INGENIOUS SOLUTIONS, THE SIMPLICITY OF INGENUITY WITH WHAT WE HAVE
MAXIMUM RESULTS AT MINIMUM COST, ENGINEERING AIMED AT OPTIMIZING BUDGETS
- ▶ FROM THE CONCEPTUAL AESTHETICS TO THE FINAL FUNCTIONALITY
WE MATERIALIZE WITH PRAGMATIC CHOICES AND A PRACTICAL VISION
- ▶ ATTENTION TO THE DETAIL IN EVERY FINISH
BY PROFESSIONAL CHOICE AND PASSION
- ▶ FOCUSED ON THE DETAIL BUT WITH A GLOBAL VISION
NOT PLACING LIMITS ON QUESTIONS

WHO WE ARE

MARIO ROMEO

ALESSANDRO BOTTAZZINI

VALERIO RAVAZZANI

RBR was founded in 2011 to provide technical services for the development and operational implementation of projects and products in the construction, interior finishing and furnishings sectors, addressing in particular to furniture, contract and marble processing companies.

RBR is a design studio in which the practical skills on different construction materials that the three owners have developed in their previous professional experiences find concrete perspectives.

Marble, stone, metals, glass, wood are the starting point of any project, but to be used to their full potential it is necessary to really know their characteristics, the dynamics that they can present with their use and know how to best harmonize them for a specific goal.

Starting from this materials culture, now assimilated and enriched by the skill exchange, we created an operational design center and we can work globally or on the parts of a work plan. Thanks to a consolidated, close-knit team and a well-structured network of coworkers, we are able to develop projects in Italy or abroad, in optimal times.

Trait d'union between architects and installers present on site, RBR makes feasible and tangible what customers want to translate into reality

“Per il teorico tutto è pratico
per il pratico non tutto è teorico.”
